

THE LAND OF LINGER LOO

A lullaby for the cradle roll boys and girls of Carbon.

(By Swan Tichborne)

Close your eyes, Ma's darling baby,
And see the fairy train
That takes you to the land of dream
And brings you back again.
It takes you to a land of rest,
Where skies are ever blue,
And you see the baby's sunshine
In the land of "Linger Loo."

There you'll see the fairest faeries
All decked in glistening stars,
Their hair in golden tresses
And their ride in golden cars,
Their lips are moist with sweetness,
Like lilies dipt in dew,
And their eyes are always sparkling
In the land of "Linger Loo."

There the grass is burnished silver
And the trees are burnished gold;
There the flowers are ever blooming,
For they're never, never old,
There you see the roses, roses,
And blue bells of bluest blue,
And each petal on the daisy
Means a kiss in "Linger Loo."

So close your eyes my darling
And see the fairy train
That takes you to the land of rest,
And brings you back again;
For there's an eye that's ever watch-
ing,
And a hand to guide you through
The beauty spots of slumberland,
The land of "Linger Loo."

A NEW STORY ABOUT KING EDWARD VIII

(Maywood Syndicate)

How the present King of England called on Fannie Bruce when he visited the United States as Crown Prince, is told for the first time by the comedienne herself in her memoirs in the March Cosmopolitan.

"One afternoon," she said, "I had just returned from an auction house. I had never felt so united and proud in my life, and I looked it. The door-bell rang and I went to the door myself.

There stood Johnny Wamaker, Jr., an old friend's brother-in-law and a slight, blond young man with nothing particular about him to distinguish him from any chairman of the day. Johnny introduced him by some commonplace English name.

"I made my excuses and went into the bedroom to groom myself. There I saw the nurse. Her eyes were like saucers—she looked frightened. 'What is it? What's wrong?' I asked.

"That is the Prince of Wales in there!"

"You're crazy," I said.

"No,—no,—no look downstairs; there are five bodyguards! Hush!—that was the English elevator boy—recognized him as the Prince of Wales."

"I returned to the dining room, and sure enough, there was the much publicized face of Edward Albert, Prince of Wales.

"I was careful to show no signs of recognition, but when I ushered him into the living room and he admired the petti-looking upholstered chair he was about to sit down—which I had bought at the auction—I laughed and said: 'Yes, take that chair; and when I come to sell it, I'll get twice as much because you sat in it.'"

How True

I am a nickel,
I am not on speaking terms with the candyman.
I am too small to get in the movies.
I am not large enough to buy a necktie.
I am of small consideration in the purchase of a soap.
I am not fit to be a tip—but believe me,
When I go to church, I am SOMEBODY.

A hen is the only living critter that can sit still and produce dividends.

HESS POUTRY PAN-A-MIN

A conditioner and mineral supplement, guaranteed.

Increases feed consumption and increases egg production by nearly 20%.

WILL FIGHT FOR THE HONORS IN DIV. ONE OF M.D.

Chas. Gwynn and Thos. King Nominated

ELECTION TO BE HELD

At the nominations for councillors for Divisions one, five and six, of the Municipal District of Carbon, held on Saturday afternoon from 3 to 4 p.m., the retiring councillors in the last two divisions named were re-nominated, and no other nominations being received, they were declared elected.

Mr. H. Crowell was re-nominated in Division 5, and Mr. G. Webber in Division 6.

In Division One, Mr. Wright was the retiring councillor, and two nominations were received for the vacancy, Chas. E. Gwynn, and Thos. J. King. With two candidates for this office of councillor for Division One, there will be an election which will take place on Saturday, February 22.

There will be two polls, one at the Gamble School and the other at the Municipal office, Carbon, P.M.s will be open from 9 a.m. to 5 p.m.

NESBITT WINS THE GRAND AGGREGATE. SWALWELL 'SPIEL

The annual bospital of the Swallowwell Club concluded last week with local risks winning out in the main events, and Bert Nesbitt taking the Grand Aggregate with the most wins to his credit.

Swallowwell has a real fine bospital every year and this year, although the weather was the coldest in history, a large entry was received and many interesting games resulted.

The following are the results: Golf Challenge Event—1, Harry Longstaff, Swallowwell; 2, Dave Brown, Three Hills; 3, D. Gibson, Swallowwell; 4, M. McInnes, Acme.

Hotel Royal Event—1, B. Nesbitt Swallowwell; 2, H. Webb, Swallowwell; 3, M. Hutchinson, Three Hills; 4, Dave Brown, Three Hills.

Grand Aggregate: Bert Nesbitt, of Swallowwell.

The consolation event was postponed on account of the severe weather.

The following risks participated in the Swallowwell Bospital: McInnes, of Acme; Brown, of Three Hills; Longstaff, of Swallowwell; Nesbitt and MacLennan, of Swallowwell; Gries, Twining; Hollingshead, Dave and Hutchinson, Three Hills; Small, Acme; McArthur, Snider and Halbert, Trochu; D. Fowler, Acme and Greenan and Besant of Carbon.

FINAL MEETING OF 1935 MUNICIPAL COUNCIL

The final meeting of the 1935 Council of the Municipal District of Carbon No. 278 was held in the Municipal office, Carbon, on Saturday morning, February 15th, at 11 a.m., with all councillors present.

With the business of correspondence payment of accounts, etc. was transacted, and the Council approved the Auditor's financial report.

With the business of the meeting completed, the council adjourned, to be present later at the Annual Meeting.

E.P. Foster Speaks in Debate On Speech From Throne in Legislature

The debate on the Speech from the Throne continued last week, and on Monday, when our Government member, E.P. Foster took the floor. In part, Mr. Foster said:

"In continuing the address to the Speech from the Throne I am not going to follow exactly the precedent set forth by my colleagues who preceded me. In most cases they have proceeded to chastise the leader of the opposition, and I believe that a boy can be made worse by continually nagging at him. Therefore, I intend to refrain, as far as possible, from attacking the leader of the opposition, and may say that in this house the leader of the Conservative party seems to have overlooked, possibly due to the more or less mannerly way in which he carried out his campaign, and partly due to the fact that it is not considered British justice, to attack one who is not properly protected numbers."

"Many of the members of the opposition have repeatedly asked why I, Hon. Premier, have started the moulding of this province into a Social Credit plan long before this; but it would have been just as dangerous to build the frame-work of a new economic structure without first laying a firm foundation, as it was for the Romans to leave their defenceless slaves to the gentle mercy of an invading Greek and Gaul. And I believe that our Hon. Premier had shown the most alert judgement in first laying a foundation of rock upon which to build.

"The foundation has not been en-

tirely built since August 22, 1935, but I started three years ago when our Hon. Premier first started educating the people of this province. He, too, like the Romans, knew that he must have the great mass of people at his back, and in the early stages he deliberately set out to educate the people as to what was theirs by heritage and had deliberately been taken from them by the financier who had a strangle hold on the credit of the people.

"We frequently hear of large classes of pupils in some of our schools, but this is the first time in history that any man, single handed, taught seven hundred and thirty thousand people from the primary grades to graduation in three years and one half. And we know they have graduated, because on August 22, of last year they expressed themselves in no uncertain terms as to the knowledge of the subject, and I believe, without fear of contradiction, that the people in this province are ready to stand behind our Hon. Premier until the last.

"I was attending a constituency convention not long ago at which the predominant voice was: 'If Mr. Aberhart cannot put Social Credit in force in two years, give him five, because he has made no mistake so far in his government.'"

NOTE—Next week we will continue Mr. Foster's speech in the legislature, for the benefit of our Social Credit readers and others who may be interested.

BEST GROWERS SIGN CONTRACT ON A 50-50 BASIS

LETHBRIDGE—The beet growers of Southern Alberta are to raise beet prices to 50-50 basis. The growers have signed a contract with sugar manufacturers on all sugar manufactured within the province as the result of a joint meeting of the executive of the Beet Growers' Association, the Marketing Act committee and T. George Wood, Manager of the Canadian Sugar Factories, Limited, according to reliable information.

The new contract will mean approximately \$4.50 per acre increase over last year's contract according to the estimate made.

Reading a paper the other day, George asked: "Mother, what's a lady's auxiliary?"

ALBERTA FARMERS GET \$2,750,000 FROM DOMINION GOVT

Twenty-seven thousand Alberta farmers will benefit to the extent of over \$2,750,000 through equalization of the 1930 payments on pool wheat as announced by the Dominion Government on Tuesday.

Statement to this effect was issued by R.D. Purdy, local manager of the Alberta Wheat Pool, Tuesday afternoon. Mr. Purdy noted that the payments would be of great benefit to farmers, as they will receive the most time for spring work—Calgary, Alberta.

lady's auxiliary?" Mother: "A man, I guess, my boy."

Some Odd Accidents

A writer in the Baltimore Sun tells of some unusual cases contained in casualty files to which he had access in several offices in the city. Claims paid and unpaid, were made in each case dealt with.

One peculiar case was that of a woman who went into a cellar to attend to the furnace. Through a defect in the plumbing a water heater exploded. A portion of the heated water fell against her, and she was branded it with letters and figures in the reverse: "Patented 1888."

Another record was that of the young man and a girl who were dancing in a public dance hall. They watched clear out of the hall and down a stairway. Late evidence showed that the couple had probably taken a drop too much, even before the one that shook them up. Still they brought suit for damages.

A third claimant was the man who suffered the loss by fire of a pair of whiskers, which it had taken him most of his mature years to raise. He considered that he had exceptional care for damages.

Then the case of a bank depositor. He seemed to make a notation and picked up what looked like an ordinary pencil lying upon one of the teller's counters. It would not write so he unwrapped the cap on one end. It was full of tear gas, kept there in case of a hold-up. In this case damages were paid.

A presidential judgement in a golf case dealt with the killing of a cat by a golf ball hitting her on the head near a fairway one hundred yards

distant from the golfer. This particular accident happened in Dover, England, but a suit of \$10,000 was recently instituted by a Baltimore lady hit in the eye by a golf ball.

There was a record from Canada telling of two men playing billiards in a building across a court from a room occupied by an elderly lady. A billiard ball bounced off the table, went thru' the window of her room and frightened her to death. The jumped out of a trap and upset a coffee percolator. This set fire to the cloth and soon the room was burning. The woman died of shock. The billiard hall proprietor was held liable.

A prominent North Carolina lawyer owned a pet crow. He was sitting on a bench in his yard with a table perched on his back. The lawyer turned his face towards the bird. The crow pecked him in the eye. As the holder of an accident insurance policy he collected.

A peculiar secondary result of an automobile accident is related. Peacefully cooking supper over her kitchen range, a woman was so badly scared when an automobile struck her house that she jumped and landed sitting down upon the hot stove. She was seriously burned. The auto driver was held responsible.

Then there's the bathtub story given. It concerned a young lady bathed, already to step into the tub. She stepped instead on a piece of wet soap and flew straight out of a low window, landing on a sand pile in the yard below. She suffered injury only to her dignity.

FIRE DESTROYS YUKON BARRACKS OF R.C.M.P.

WHITEHORSE, Y.T.—Fire of unknown origin completely destroyed the men's quarters and detachment office in the Royal Canadian Mounted Police barracks here on Saturday, Feb. 16. All personal effects, office records and equipment were lost in the flames, which swept through the timber dry structure despite the efforts of members of the force who fought the fire with emergency fire extinguishers in 30 below zero weather.

The building was constructed of native Yukon lumber 36 years ago when a large forest was maintained here for policing the northern districts.

SILVER TEA SERVICE PRESENTED TO MR. AND MRS. WRIGHT

In Appreciation of Their Faithful Services

Mr. and Mrs. S.N. Wright were the recipients of a beautiful silver tea service from the residents of Carbon Municipality, the presentation being made at the annual meeting of the Carbon Municipality on Saturday.

The presentation was made by Mr. L. B. Hart in appreciation of the services of Mr. Wright as Reeve of the Carbon Municipality for the past eighteen years, and of his helpmate, Mrs. Wright. Mr. John Atkinson read an address of appreciation, and Mr. Wright responded in a fitting manner.

Your Bank, And How You May Use It

There is much about bank methods and practices that is a mystery to the ordinary man and woman. They know about savings accounts and cheques, but they know little about numerous other services that the banks are prepared to give them.

To enlighten the public on this subject, the Bank of Montreal has just issued a new edition of its booklet entitled "Your Bank and How You May Use It." Prepared "for the purpose of setting forth the many services in which the bank can serve the individual," this booklet is really a most valuable manual on Canadian banking.

In connection with the range of services which the bank offers to the public, the booklet is illustrated by reproductions of various bank forms correctly filled out, and such points as the difference between "Order" and "Bearer" cheques are explained. Among the subjects dealt with is that of borrowing money from the bank—a subject that is of timely interest and of particular importance. The booklet may be had free by asking at any branch of the Bank of Montreal.

TESTED RECIPES

Parsnip Patties
To 1 c. of boiled, mashed potatoes and 1 c. mashed parsnips add 1/2 c. cream and 1/2 tsp. baking powder and season to taste. Beat well. Fry in frying pan with egg flakes.

Parsnip Eggs
In a large bake dish place mashed parsnips which have been whipped light. Make as many hollows as the bowl of spoon as there are diners to be served. In each hollow place an egg, pour a trace of cream on each. Sprinkle with grated cheese and bake 5 minutes.

ANNUAL MEET TAXPAYERS OF M.D. CARBON

Vote of Thanks Tendered To Retiring Council

DISTRICT DEBT-FREE

The annual general meeting of the ratepayers of the Municipal District of Carbon was held in the Farmers' Exchange hall, Carbon, on Saturday afternoon, February 15th and a large number of interested tax payers were present.

The Financial statement of the Carbon Municipality was reviewed and financial conditions met with the approval of the tax payers. It was revealed that the Municipal District of Carbon is in excellent financial condition, with all accounts paid and a nice surplus on hand. This financial condition is excellent, when it is considered that the taxes in the Carbon Municipality are lower than any adjoining Municipality, and the improvements to roads, etc., are equal if not better to the neighboring districts.

A vote of thanks was tendered to the retiring council for their splendid services during the year, and particularly to Mr. S.N. Wright, who has served faithfully on the council for the past 24 years, the last 18 years of which he served as Reeve. Having joined business in Carbon, Mr. Wright has tendered his resignation from the council.

The councillors also expressed their respect for Mr. Wright from the council board.

At the close of the meeting, nomination for councillors for Divisions 1, 5 and 6 was held, and the result of which appears elsewhere in this issue.

HESKETH SKARKLETS

We saw that there were no Hesketh Sparklets last week, but the reporter had been to Calgary for a few days. 'Nough' said.

The Mayors of Sharpley was a Hesketh visitor for a few days last week.

We know now why Blende is always getting new boy friends. Last week she was kissing her new sweetie good night, and now the poor fellow has got the mumps. Dore was right when he said there were germs in kisses. I wonder if that is how all the young bucks are getting the measles.

Mr. and Mrs. W. Kaiser and baby have come to make their home with Jacob Zeigler.

Miss Joyce Langer is spending a few days with Peggy Zember.

Jacob Zeigler took his John Deere tractor home on Tuesday, after having it overhauled at Andy's Service Station.

James—What the matter with your wife? She looks all broken up.

Smith—She got a terrible shock.

James—How was that?

Smith—She was assisting at a rummage sale at the church, and she took off her new \$2 hat and someone said it for 30 cents.

"It's a TEA" is delicious

Making And Unmaking Deserts

The area known today as the prairie provinces of Western Canada appeared on the maps a few decades back under the designation "Great American Desert".

That was a misnomer, known only to a handful of people who wanted to maintain the area as a preserve for fur-bearing animals. The truth was that the great bulk of this large territory was not only not a desert but was covered with a luxuriant turf and a substantial portion of it was the habitat of trees and shrubs.

Like most truths this verity came to light and thousands of people flocked in, converted millions of acres into farmsteads and proved that the land was good and capable of producing grains, grasses, vegetables and livestock in abundance.

After taking possession of this newly-discovered heritage the settlers proceeded to develop it. The soil was turned over, at first a few acres at the time but later, with modern equipment more accessible, they plowed it up by the square mile and grew grain in huge fields. Trees were cut down and every shrub torn up by the roots. Mile long furrows without an impediment was the objective. Prairie soil, except for small reserves for pasture disappeared. Trees and shrubs vanished.

Then came the summer-fallow method of cultivation to give the land a rest from cropping and permit it to stock up a reservoir of moisture for a succeeding crop. In this process the land was worked up into a fine tith—turned into dust, the finer the better, it was thought.

By the time this system had become well established, the human and root fibre of the original prairie soil was well worked out and the soil became finer texture each succeeding year. Then came the drought, several years of it for some sections, and during this period the huge prairie winds whipped the fine dusty soil into the air and you can still see it up against fences and buildings and covering highways and what pastures remained.

In some districts the fine soil was swept off down to hardpan and that is the plight of these districts today. If these reckless methods are continued, the denuded area will increase in size and unless an extensive program of rehabilitation is followed the time may come when the "Great American Desert" will be a reality instead of a misnomer.

There is abundance of evidence that man can and does make deserts, as witness W. L. Lowdermilk, associate chief of the Soil Conservation Service, United States Department of Agriculture. In a recent issue of a magazine article that the history of civilization "may be interpreted in terms of soil erosion, so direct is the relation between the productive condition of soils and the prosperity of the people."

Mr. Lowdermilk refers to archaeological discoveries demonstrating that the Sahara and Asian deserts, arid parts of Palestine, Mesopotamia and the Gobi and North China deserts were once teeming with human life and outlines the process which eventually converts fertile lands into areas of aridity and sterility.

Many students have attributed desiccation and the consequent drying up of streams to the removal of forests. That is only part of the story. The great enemy of the human race is soil erosion which has been associated with the habitations of man since before the dawn of history. The removal of vegetation, whether grass, brush or forest, exposes soils to the lash of rain or the blast of wind, against which they have been protected for thousands of years.

Usually blow away or wash away or both. Unprotected sloping lands are topsoil bared to hard and light subsoils which drain off the water as from a tiled roof. The perennial streams, deprived of their reservoir of supply, dry up except in rainy seasons, when they become torrential floods and sweep boulders and debris down the slope to deposit them on otherwise fertile lands. Then starving wild or domestic herds clean the devastated areas of all palatable vegetation, only to reduce the effectiveness of beneficial rains and accentuate aridity.

Truly, a dismal outlook, but fortunately residents of the western provinces and their governments are becoming aware of the danger and are the first time serious efforts are being made to stem this waste and prevent ultimate disaster. Reference to the work and program of the Federal conservation commission, the United States Department of Agriculture, recently. Provided there is widespread knowledge of the causes of soil erosion and a lively appreciation of the plight to which it may ultimately lead, there need be no fears that plans will be rendered abortive for lack of co-operation on the part of the general public. For, if deserts can be made by man they can also be restored to fertility by human agencies working co-operatively but it is a slow process and an uphill job.

Included in the several recuperative agencies which the committee hopes to press into service to repair the damage already done and prevent further serious loss is a tree planting program. This year five million trees are to be distributed to farmers in the three provinces from the Indian Head experimental farm. While five million may sound like a lot of trees, they will only make a small contribution to the problem. Many more will have to be planted to be effective on a scale proportionate to the problem to be solved.

Retired After Long Service

Registrar in Wales Held Position For Sixty Years

Sixty years as registrar of marriages for the Home Office in Wales is the record of John Lloyd, of Haulfryn, Wales, who has just retired, in his ninety-third year. He claimed to be the oldest active Government official in the world. On one occasion he officiated at the marriage of a great-grandchild of his and his wife, his great-grandson, who was then a young man, was his best man.

According to the most reliable historical records, approximately 13,000,000 human lives have been lost in earthquakes.

Start Lonely Task

Men Building Fog Signal Off Coast Of Scotland

Five men have started on the lonely task in the Hebrides. They are building an automatic fog signal beacon on the Stob Gorm, a rock in the Atlantic two miles north of the island of Croil, off the coast of Scotland. The men are living in a hut on the rock, and may be marooned there for many weeks.

In recent French army manoeuvres, motorized troops were judged superior to cavalry.

In Java, thunderstorms are almost a daily occurrence.

Great French Flying Boat

Thirty-Ton Craft May Be Used For Ocean Service

Residents of the British West Indies are hoping for a sight of the giant new French flying boat, Lieutenant de Vaisseau Paris, when it visits France's colonies.

The 20-passenger ship, built for experiments in trans-Atlantic mail and passenger flying, will pass over the Leeward and Windward Islands on its trip, celebrating the 30th year of French rule in Guiana and the Indies. It will call at French Guiana, Martinique, Guadeloupe and French-speaking Haiti.

Taking part in the anniversary trip also will be five other aeroplanes, with the Ennui, Berlin, France's largest cruiser-mine-layer, and the Surcouf, world's biggest submarine. They will be on hand for the inauguration of naval bases at Martinique and Guadeloupe.

Chief interest centres in the great flying boat. Powered with six motors, the huge craft has a wing spread of 160 feet and is 103 feet long. It has a cruising speed of 140 miles an hour. Its luxurious interior includes a large lounge, double bedrooms, cabins, second-class accommodations, a kitchen, bathroom and even a bar. Most of these fittings have been taken out for the present trip, but they are being shipped across the sea to be reinstalled at Martinique.

The London craft, manned by eight officers and several mechanics, has been designed for oceanic flying by way of the southern route. If experiments prove successful, France hopes to make her the first unit in a service between that country and the United States.

The Largest Exhibitor

Irish Free State Heads List At British Industries Fair

The British Industries Fair, the great "shop window" of the British Empire, is being held in two sections this year as usual, and opened in London and Birmingham simultaneously. A dispatch from London states that the Empire country sending the largest number of exhibitors is the Irish Free State, Canada coming next.

And the Irish Free State has refused to proclaim King Edward VIII, although President De Valera did send a message of sympathy.

The Irish Free State does not always treat British goods well, as admitted to the British Empire Fair. But they will not do that, and the Irish are likely to do a great deal of business in London and Birmingham.

—St. Thomas Times-Journal.

Bodyguard To King Edward

Chief Inspector Of Scotland Yard Named For Post

The present bodyguard of King Edward VIII, who is Chief Inspector David Storer of Scotland Yard, former teacher who acted in that capacity for Edward as King of Wales and accompanied him on his tour of Argentina.

Inspector Storer took over those duties a few years ago on the death of Chief Inspector Burt, who had performed them for ten years "shadowing the Prince all over the world."

The new king, like his father, also has shown the greatest consideration for the man appointed as his personal "shadow". King George always treated Inspector Storer as present in command of Buckingham Palace police—like a friend.

Superintendent Storer is a detective of the late King will now act in a similar capacity for Queen Mother Mary.

Luxury For Women Migrants

Women workers of the Minto colliery at Lehigh, Scotland, are to enjoy the luxuries of \$75,000 pithead bungalows which have just been built. It brightly decorated rooms they are to enjoy spray baths, rest on divan, dry their hair before electric fires and have smoking clothes dried and cleaned ready for the next day's work.

Illuminated Dance Floor

Dancing on waves of light floor, in effect, he opens when a new lux is added at Bathurst, N.S.W. is completed, its open-air ballroom a floor of glass. It will be illuminated from beneath in such a way as to give the effect of light waves passing through the glass.

New York state contains 49,204 square miles.

Conservationists Meet

Says Secretary Idea Originated In Saskatchewan

A plea that conservationists use their voting strength in political elections was made by the American Wildlife Life Conference at Washington by Jay N. "Ding" Darling, former chief of the biological survey.

More than 1,500 games and fish authorities heard Darling's address at the conference's opening session after greetings were read from President Roosevelt, Prime Minister Mackenzie King of Canada and the president of Mexico.

Mr. King's message, read by J. B. Harkin, Canada's commissioner of national parks, said:

"The treaty between the United States and Canada for the protection of migratory birds indicates the inter-relation of interests between our countries in that phase of wild life conservation."

"Following the policy established by the treaty, Canada is pleased to join with the United States of America and the republic of Mexico in the present effort to advance the cause of conservation of North America's wild life to the end that the full economic and aesthetic possibilities of this great and distinctive resource may not only be enjoyed by the present generation but be handed down unimpaired for the future citizens of this continent."

J. B. Harkin and Senator Lloyd represented the Canadian government and Senator John Zinner spoke for Mexico.

Lloyd, who is secretary of Canada's advisory board on wild-life protection, told the conference the Dominion was making great progress in conservation.

"The sanctuary idea in North America," he said, "originated in Canada with the establishment in 1857 of Last Mountain Lake sanctuary in what is now the province of Saskatchewan, because it was recognized the invasion of agriculture would replace much of the interest and valuable water in the prairies, unless such bird safety zones were established."

SELECTED RECIPES

COFFEE CAKE

Temperature: 400 degrees F.

Time: 25 minutes.

1 1/2 cups brown sugar

1/2 cup "Crown Brand" Corn Syrup

1/2 cup milk

1/2 cup sugar

2 teaspoons baking powder

1/2 teaspoon salt

1/2 cup shortening

1 egg

Sift together the flour, sugar, baking powder and salt. Cut in the shortening with the fingertips.

Beat the egg until light, then add the sugar and the "Crown Brand" Corn Syrup. Add to the flour mixture and stir just as little as possible. Put into a 9-inch cake pan which has been greased with Mazonia. Spread the mixture evenly in the pan, then sprinkle on lightly the following mixture:

2 tablespoons butter

2 tablespoons "Crown Brand" Corn Syrup

2 tablespoons Benson's Corn Starch

1/2 cup cracker or cookie crumbs

1/2 teaspoon cinnamon

This crumb mixture should be well mixed before putting on top of the batter. Bake the cake in a hot oven and serve hot.

Patent Tax

Appeal Will Be Made To Privy Council In England

Appeal will be made to the privy council, the highest court of appeal, in the case of the Manitoba government's two per cent. wage tax as it applies to federal government employees. In that province, it was learned in Winnipeg. Decision of counsel for the civil servants to the appeal to the Empire's highest tribunal follows the recent adverse decision handed down by the supreme court of Canada. It is believed the case will be argued in London next June.

Colorful Styles For Men

Coated dinner coats, patent champagne, royal blue, steel evening gowns, Algean styled, the latest fashions featured among the 1936 styles for men which were released when hundreds of delegates from all over Canada and the United States gathered in Toronto for the annual international convention of the Merchant Tailors' Association.

Death Ray Harnessed

Will Now Be Assigned To The Task Of Saving Human Lives

The most potent death ray yet devised by man was assigned to the task of saving human lives.

Tests of its power in this respect were prepared in the physics laboratory of the University of Illinois. The ray, a beam of neutrons 14 times more deadly than X-rays, was to be shot from a scientific "gun" now being assembled under the direction of Dr. P. G. Kruger.

Human approach within 50 feet of the "gun" was unwise because of the speed with which the ray destroys the white corpuscles of the blood. All shields, including those normally used for protection against X-rays and radium, are vulnerable to the deadly beams. The "gun" must be operated by remote control from a distant switchboard.

Experiments have shown, Dr. Kruger said, that the rays reduce the white blood count from 8,000 to 300 or 400.

Although this means almost certain death to normal human beings, physicist asserted, it may mean just the opposite to victims of leukemia, the disease in which white corpuscles grow so fast they kill the life bearing red ones.

Another possibility, he said, was use of the ray to kill the wild growing cells of cancer and Hodgkin's disease.

No Truth In Stories

King Edward Cannot Visit Dominion In Near Future

Stories of a possible visit in the near future to the Dominion of the king by way of members of the royal family should be taken with a good deal of reserve.

To begin with, the court is in mourning for nine months. Then, the coronation will follow. Whether the king will go to India for a coronation ceremony in India is believed to be quite undecided. Sooner or later, it is likely the Duke of York, heir presumptive, will make a tour of the Dominion as did his father when he held the same title.

"The Bedouins" says a returned traveler, "are as smart as thieves as ever." Still silently stealing away.

Kipling Knew His Bible

Was Familiar With Subject Matter Of Every Chapter

Two of the greatest hymns in the church hymn book of the protestant churches are "Let Us Forget" and "Hark the Herald Angels Sing." They are the common property of all the churches. Kipling wrote one, Wesley the other. Kipling knew the subject matter of every chapter in the Bible. These great Englishmen can be heard in their tolerance of many errors, yet they never get far from the Bible. In reading King and many of the tales about the soldiers in India, it would be hard to think of their author as a Bible student. He must have carried a Bible with him in all his wanderings through India. What a lot of young men throughout the country and the United States would think it useless and cumbersome. But the young men of England who have been well taught, who can see their country as the defence against the inflow of barbarism that threatens the whole world, the Bible and keep it near them.

Colonization

Four plans of colonization in Saskatchewan, financed by British capital, have been outlined to the provincial government by a delegation of citizens from Moffat and Wolsely.

ARE YOU TROUBLED WITH NERVES?

Do you find it hard to go to sleep at night? Do you feel poorly rested in the morning? "Jumpy" all day, a "ragged" evening?

Then take **Wincadine**. Here's a delicious wine, not a drop of alcohol, soothes your nerves as nothing else can; it helps you quickly to sleep and floods your whole being with vibrant new energy. Wincadine brings you all the valuable vitamins and minerals found in the highest grade beef and guaranteed to be pure. As soon as you begin taking Wincadine, you feel wonderfully better. This is because Wincadine enriches your blood, soothes your nerves and creates lasting reserves of strength and energy.

Over 20,000 medical men have proved in practice the value of Wincadine in cases of jumpy nerves, insomnia, anæmia, debility and general indisposition. Get your bottle of Wincadine from your druggist or write to: **Wincadine Co., Ltd., Toronto.**

STOP THAT COLIC IN A HURRY WITH

Laxative GROVES' BROMO QUININE

You can't be certain with colic. There are many causes. You need a medicine that will cure the Groves' Bromo Quinine. Groves' is a name to know. It's the only one. Ask for Groves' at your Druggist. Ask for Groves' at your Druggist. Ask for Groves' at your Druggist.

Observations Confirm Theory That Universe Is Increasing in Size

Is the Universe infinite? If not, how big is it? Is it expanding, or does it size remain the same?

Three leading men of science, Sir Arthur Eddington, Sir James Jeans, and Dr. Edwin Hubble, of the Mount Wilson Observatory, U.S.A., have all made statements on these questions.

Sir Arthur Eddington has just confirmed by theory the astronomical observations that the universe is doubling its size every 1,300,000,000 years.

It has frequently been asserted, both according to theory and practice, that the universe is expanding, but Sir Arthur Eddington's calculations for the rate of growth from theory alone were at first about twice as big as those calculated astronomically from the fact that objects in the heavens appear to be rushing farther and farther away from us.

Further calculations have now made the figures very nearly agree. Sir James Jeans thinks the expansion of the universe will be definitely known some day.

Speaking at the Royal Institution in London he said: "Assuming space to be finite and therefore spherical, with a telescope we find that the power of the world's most powerful at present, the additional area of space brought within our vision would not be ten times the present visual area. The number of fresh nebulae would accordingly decrease in proportion."

"From this we hope ultimately to calculate the size of the universe."

And this is what Sir Arthur Eddington has to say in a lecture at Yale University about the world's present telescopes.

"Our great 100-inch telescope can see as far as 500 million light years away," he said, "and the whole space revealed is estimated to be equivalent to the number of about 100 million, which appear like swarms of stars traveling like a colony of bees in flight."

As far as can be seen, he went on, there is not a trace of a void in the universe in any direction.

"The telescope detects nothing whatever to forecast how much farther man must push his way to the frontier of creation, or even to find anything startlingly different."

May Be Good Market

China Offers Prospects For Canadian Pearl Barley

There would seem to be a large market opening up for Canadian pearl barley in the Hongkong market, due to the shortage of the same sized barley from Germany, the principal supplying country along with Holland. Canada's Pearl Barley States have about an equal share of the barley market, with Canada supplying a shade larger quantity, according to the figures from the department of the Canadian National Statistics. German barley is favored for its cheapness and for the roundness of kernel, although importers are inclined to the opinion that the North American article is superior in uniformity, grading and absence of dust. The principal objection to barley from North America, apart from price, is the coloration of the kernels and tendency towards an oval shape.

Evidently Knows Good Food

Cow In South African Town Is Fond Of Beans

An egg-eating cow is the pride of Komgapa, a little town in Cape Province, South Africa. All day long it forages around the native huts looking for eggs which the hens usually lay in the open. When it finds a nest, the cow devours the eggs, shell and all. Hens which offer opposition do so at risk of their lives. Recently a hen sat defiant on her eggs—and the cow, becoming angry, ate her, and then finished off the eggs in the usual way.

Was Frank Anytime

Why is it a panhandler always wants a coin for a cup of coffee and never for a cup of tea? And that reminds us of the mendicant who stopped a citizen on Broadway and begged for 50 cents so he could join his family. "And where is your family?" inquired the citizen. "In the balcony of the Paramount Theatre," was the reply. His frankness was worth a dime.

"A telegram from George, dear," "Well, did he pass the examination this time?" "No, but he is almost at the top of the list of those who failed."

Belongs To Bean Family

Contrary To General Idea Peanut Is A Vegetable

It happens that the peanut in reality is not a nut at all, but a vegetable. It belongs to the bean family and sometimes is called the burrowing bean. This name arises from a peculiar habit of the plants after they have grown to a height of between one and two feet and put forth blossoms the flower withers and the stem bends down, forcing the young pods underground. They mature and then are dug and dried.

Doubtless this unusual habit of the peanut accounts for some of the peculiarities by which it is known, and it may be that these names have something to do with the unfortunate fact that the peanut has never held as high a place in the public esteem as it really deserves. Admittedly, it may be difficult to regard with much respect a product known variously as monkey food, goobers, groundnuts.

Anyway, Texas has a right to feel that any levy in connection with peanuts is misplaced for a crop that can be depended on to put from \$2,000,000 to \$4,000,000 annually into the pockets of Texas farmers is not to be scorned.—Texas Weekly.

Seed Shocks

Alberta Is In Need Of Seed Oats, Barley And Wheat

Preliminary surveys indicated the Alberta government would be called upon to supply more than 1,000,000 bushels of seed oats, 300,000 bushels of barley and a large quantity of wheat for spring seedling. G. S. Longman, field crops commissioner of the Alberta department of agriculture, estimated that over a million bushels of seed would be required. Calgary and district farmers in an address at Calgary.

The seed situation was that was not of a grade desired by officials, undoubtedly would have to be sown. Mr. Longman said, but widespread and early frosts had created a difficult position in the province. The barley situation provided a problem and prospects would have to be obtained from outside Alberta, the commissioner added.

The seed situation was the worst in his 20 years' experience, according to G. M. Stewart, inspector for the Dominion seed branch.

New Type Of Clinic

Vienna Doctor Intends Opening One For Jealous People

Interest has been aroused at Vienna by the recent remarks of Dr. Wilhelm Stekel in the course of a lecture. Dr. Stekel claims that there has been a great increase in jealousy since the world crisis. The reason, he says, is that unemployed persons have more time to devote to his own ego, and therefore discover many things which he had not noticed before. Social problems help the growth of pathological jealousy, Dr. Stekel, who intends to open a clinic for people suffering from jealousy, thinks that patients will find great relief if they can discuss their case with a doctor. If the jealousy is unfounded, the patient must be convinced by careful persuasion that his fears are absolutely without any foundation.

Small Scale Was Right

The mighty engines of the liner thrashed ceaselessly. The chief engineer, weary a perspiring forehead, he is accented at the deafened young man with the oil-can.

"Look here," he growled, "you aren't helping me much with these engines. I understand you know something about the game."

"So I do," stammered the other, "but on a smaller scale, you know."

"What's your small job?"

"Watch repairing."

Making Soldiers Follie

To "discourage sweating" among Italian troops, military chaps are presenting to each soldier a little book of "short and fragrant anecdotes." The work is fully illustrated and small enough to fit a uniform pocket. It is hoped to make the fighters polite as well as efficient.

Record As Novel Writer

Believed to have written more Italian troops, military chaps are presenting to each soldier a little book of "short and fragrant anecdotes." The work is fully illustrated and small enough to fit a uniform pocket. It is hoped to make the fighters polite as well as efficient.

The SNAPSHOT GUIDE

OUR GOOD FRIEND WINTER

Winter brings many picture opportunities.

Old Man Winter may not be popular with everybody but he is a landscape artist, painter, etcher and sculptor of the first order. Remember also that his handwork is feeling, so do not fail to have your camera ever ready to take pictures before the opportunities are gone.

Each snowfall creates new subjects for picture taking. For you will find that each time the snow mantle is put on differently, changing the landscape to offer new features on one occasion, bringing them into relief on another, giving a peculiar charm to objects that do not attract attention in other seasons, and often displaying weird or fantastic snow formations, never to be repeated.

The King's Horses

Has Learned Raising Horses To Lord Derby For Balance Of The Season

"Though King Edward has no intention of severing the royal connection with the turf he has learned the 19 horses of the late King George to Lord Derby for the balance of the season."

Thus from the celebrated stables of the sporting peer will bring this a graceful host of snow the wind has his late majesty, still treating his colors—a purple and scarlet jacket with gold braid and a black velvet cap.

As Prince of Wales the present King showed more interest in the chase and riding to the hounds but he is nevertheless a keen enthusiast of what has long been termed the "sport of kings." And this tendency to the chase is a new indication of a new life in the royal family's personal participation in horse racing.

It isn't your position that makes you happy, it's your disposition.

Simple Patches Make Pansy Quilt

Pantries, whose valiant mothers long so much appeal for young and old, are the inspiration of a colorful quilt which you can do quickly in a single day. Simple in form—the entire flower one piece—the patches are easy to apply. It is a grand way to use up scraps for each flower may be of different color. Then, with easy outline stitch, embroider flower edges and center markings for a very lifelike effect. Tones of yellow and purple will make it realistic.

Pattern 5249 Pantries, whose valiant mothers long so much appeal for young and old, are the inspiration of a colorful quilt which you can do quickly in a single day. Simple in form—the entire flower one piece—the patches are easy to apply. It is a grand way to use up scraps for each flower may be of different color. Then, with easy outline stitch, embroider flower edges and center markings for a very lifelike effect. Tones of yellow and purple will make it realistic.

These suggest but a few of the picture taking opportunities which winter offers for the camera owner. Then, too, there are the human interest pictures of winter sports—skating, sledding, ice skating, and ice boat racing—not to forget Santa Claus and the snow, but they so laboriously hauled out the great drift in the yard. Chances like these prove a source of joy to those clever enough to shoot at the right moment with the right exposure and focus.

With regard to exposure in winter, many think that because snow is white, they should not be so long as in summer, but remember on the other hand that light is not so strong in winter. The old rule—expose for the shadows and let the highlights take care of themselves—works fully as well for snow pictures under most conditions. When, however, you wish to take a picture to emphasize shadows, as in the case of the picket fence, a sky filter placed upside down on the lens (that is, yellow part at the bottom) so that the light from the snow will be subdued in passing through should reproduce them even better with 20 to 50 per cent of detail in other parts of the picture.

So put on the galoshes and the muffler after the next snowfall, and take out with your camera. With a little thought to composition, you will come back with a "picture artist can paint" and more than one JOHN VAN GULDER.

Removing Old Landmark

Big Tree In Stanley Park, Vancouver, Must Go

Many a prestige tourist will regret the passing of Stanley park's "big tree" that monster into which a cat could be driven.

For, according to the Vancouver Star, the Vancouver park board has approved of the suggestion of W. M. Selens, Vancouver banker, that the old stump be removed. It is said the tree, which was over 100 years old, lost its charm and shrivelled and rotted away until now it is an eyesore.

Perhaps thousands of tourists remember the big trees of Stanley park, which were a source of pride and were taken by the city as souvenirs.

Laughing gas (nitrous oxide) is a colorless sweet tasting gas, is odorless and is a colorless liquid.

The hairpins in watches are made by drawing a piece of steel through a hole in a diamond.

Household Hints by Alice Driscoll Flowers May Be In One or Varied Colors Pansy Appliques

Then, with easy outline stitch, embroider flower edges and center markings for a very lifelike effect. Tones of yellow and purple will make it realistic.

Historic Richness Of P. E. I. Parliament Building Makes It Prized Across Dominion

On Interest To Dairymen

Milk Commissioners Met In Montreal To Discuss Mutual Problems

A meeting recently held in Montreal made far-reaching consequences for Canadian dairy farmers. The provincial milk commissions and other officials from five provinces held a three-day conference and discussed the mutual problems which are affecting the dairy industry. In addition three Western provinces also represented had submitted written statements.

Welcomed by Quebec by Dr. J. A. Grenier, deputy minister of agriculture, the meeting was presided over by D. L. Mellich, member of the Municipal and Public Utility Board of the Province of Quebec, and the statements of the Saskatchewan Milk Control Board, and the Alberta Utility Commissioners. Mr. Mellich then reviewed the situation in Manitoba.

Due to chaotic conditions in the whole milk trade of greater Winnipeg in 1931 the Municipal and Public Utility Board had been empowered to stabilize the industry. Prices to the producer had dropped as low as 93 cents per cwt. and there was a danger of a scarcity of milk. The Utility Board then fixed the price the farmer was to get for his milk and what the consumer was to pay for it. This action had fixed the spread allowed to distributors, of which there are nine in Winnipeg.

So far the scheme has worked out satisfactorily and seven of the nine distributors are doing well. Last year 74,000,000 pounds of milk came into the city from 800 producers within a fifty mile radius, and 55,000,000 pounds of milk was sold to fluid milk. The price was fixed last July at \$1.50 per cwt. for the ensuing four months, and \$1.81 for 35 per cent milk for the rest of the year, and Mr. Mellich indicated that they hoped shortly to establish a uniform price throughout the whole year.

True Grandeur Of England

Spirit Of Liberty Finest Thing Reputed To World

The true grandeur of England is not found in any of the wars she has fought, whether those wars were right or wrong; it is found in that tremendous spirit of liberty which she has engendered on English soil, a spirit that never failed to raise up mighty voices at home to denounce every British abomination.

When our forefathers revolted against English rule in 1775, they did not invoke the ancient spirit of liberty of their forefathers, and they were royally defended, even after hostilities had begun, by Lord Chatfield, the House of Lords, and the Edmund Burke and Charles James Fox in the House of Commons; and it was the spirit of independence which has been signed but for the revolution of our pamphlet of Thomas Paine, an English Quaker, who arrived in America from England less than five months before the events at Lexington and Concord.

This spirit of liberty is the finest thing that England has bequeathed to us and to the world in general, and we would that it might become predominant.—San Francisco Argonaut.

Crow Shooting Game

Hunters Will Receive Cash Prizes For Numbered Birds

Saskatchewan farmers will be playing a game of "lucky crow" with \$50 for top prizes if the government makes a proposal advanced by the Saskatchewan branch of the provincial fish and game league who propose to introduce such a number of the dusky marauders, hand them, turn them loose and then offer bounties ranging from \$1 to \$50 to the marksmen bringing down the numbered birds. The idea of course, is that thousands of unbandied crows would also fall to the choicest of these marksmen to bring down the big money ones.

To Spite His Relatives

Just because he does not like his relatives Ramon Ibanez, the richest man of El Paso, Spain, burned \$3,000 of his fortune and emptied a jar of coins into his well. When shocked prospective heirs asked why, he replied, "I did it so that none would be able to come from the secret of my brow."

Prince Edward Island's colonial parliament building cost \$75,000 to build. It is being repaired at a cost of \$100,000. It is probably the least costly of all Canada's provincial governments and two administrators have been in office since that time.

The other day, Colonel Sidney Harver, Gloucester man, London, sent the trustees of the confederation chamber, situated in the west wing, a portrait of his grandfather, Sir Charles Douglas Smith, who was governor of the island province from 1813 to 1825.

The portrait, now hanging in its rightful place, completes the array of governors and administrators from the time His Excellency Walter Patterson ruled in 1770. Twenty-eight governors and two administrators have been in office since that time.

Governor Patterson's grand-daughter, Margaret Gordon, who was born in Charlottetown, was Thomas Copley's first love and today is engaged a quiet snail in Prince Edward Island.

They met in Kirkcaldy, Scotland, when Carlyle, now occupying a high place among world intellectuals, was in his school teacher. Their romance was blighted by Margaret Gordon's adopted aunt, but she was not so easily deterred. Burning so feverishly as is evident by their letters, became the inspiration of a romance. Carlyle, however, identified Charlottetown's Margaret Gordon as the character of "Fanny" in his novel, "Fanny Hill," and his messengers . . . fair and golden as the dawn she rose into Skater Road.

Margaret Gordon as Lady Bannerman, a sister later, returned to Charlottetown, was the wife of the governor of Prince Edward Island, reigning as the first lady of the land. And standing far from government house, is the little building where Margaret Patterson, the mother of the first lady, was born in 1775. Details of this romantic story may be pieced together from bits of information hiding in the province archives.

Sir John A. Macdonald, Canada's first prime minister, wrote his occurrence "collected matter" when he signed his name in the visitor's book in the confederation chamber. It is a source of pride to the province. Sir John and his "Upper Canadian" colleagues were the uninvited guests who came to the maritime province to discuss the union of the horizon from a maritime union to a national union which would be a source of pride to the province.

In one corner of the museum are the first and last flags flown over Charlottetown in France during the great war.

In another, a heavy block of wood set with moving blades and spikes, a relic of the days, not so long ago, when island farmers waged war on automobiles in an effort to keep them off the island. The missile, a crude scheme to puncture tires, was most effective, pioneers of motorizing relate.

Just stones and mortar would not be sufficient to replace this old structure. The island's colonial building, housing valuable relics of the past, both crude and romantic, has become somewhat of a national shrine. And his highness is being made within its halls. Premier Walter Leas called together, in the assembly chamber, a session of the first parliament of the province. The British Empire state business without an official session.

Starting Business In North

Jake Runtz, who thinks whippers at a mining frontier settlement are as unbecoming as any lawyer, arrived at McMurray by aeroplane from Athabasca, Alta. He had his barber chair in him. Owner and chair were flown to Goldfield, Alta., where the barber is going into business.

Bulls become just as enraged before a white object as a red one. It is the sight of a strange figure, not the color, which excites them.

Woman: "Does your husband ever pay you compliments?" Neighbor: "Well, sometimes he says: 'You are a nice one.'"

A census of the Soviet Union is planned for December, 1936.

Got complete relief from pains and gas

Fruit-A-Tives brought quick relief from indigestion. Mrs. S. Everett St. Catharines, Ont., writes: "I was always uncomfortable after meals and troubled with gas. I tried Fruit-A-Tives. They soon brought me complete relief and I feel much better. Fruit-A-Tives are really different. They contain extracts of APRICOTS, ORANGES, PEACHES and HERBS. A part of nature they act naturally to help all organs function in a normal healthy fashion. Their tanginess has brought me good health to millions."

FRUIT-A-TIVES
A FAMOUS DOCTOR'S PRESCRIPTION

WORLD HAPPENINGS BRIEFLY TOLD

Dr. P. J. Kelly, of the University of Glasgow, announced that he would have to take charge of a British ambulance unit in Ethiopia.

The late Lord Dalziel, prominent British newspaper publisher, left nearly £100,000 (about \$1,000,000) to the government to apply against its public debt.

The house of assembly rejected by a large majority a suggestion the Union of South Africa should remain neutral in any war not concerning her. The vote was 10-1.

Defence to strengthen Belgium's national defences soon will be introduced in parliament. Premier and Foreign Minister Paul Van Zeeland announced in a speech on the international situation.

Persistent rumors Prime Minister Mackenzie King would visit England in the immediate or near future were set at rest by his statement he would not leave Canada while parliament was in session.

Members of the Flying Clubs of Canada Association report 13,807 hours in the air during 1935, compared to 10,508 in 1934, the association was told at the opening of its convention at Houston, Ont., by Secretary George M. Brown.

Air-conditioning equipment will be in operation on a number of the more heavily traveled lines of both railway companies during the coming summer, a joint statement issued by the Canadian National and Great Western Pacific Railways stated.

Building permits issued in Greater Vancouver during January this year totalled \$577,385, more than 2½ times greater than the total for the corresponding month of 1935 when permits were issued for buildings valued at \$97,035.

New World Record

Bank, Ottawa, Ont. Toronto, sets New Mark For Mile Walk.

Bank Cienann, Toronto's renowned pedestrian, in the new world record holder for the one mile walk, set the Achilles club veteran stepped off the distance in six minutes 23.7 seconds at the Millstone track and field center in Madison Square Garden, New York, to surpass both existing marks.

He not only cracked the indoor mark of 6:37.2, set by Mike Pecora four years ago in the Garden, but surpassed the long standing world outdoor record of 6:25.8, made by the great Canadian, George Goulding, at Montreal, in 1910.

Dominion Drama Festival

Vancouver Club Chosen To Represent British Columbia

The Progressive Arts Club of Vancouver will represent British Columbia at the Dominion Drama Festival in Ottawa in April. The Vancouver club was chosen as the coast's representative when adjudicator Allan Watt awarded them first place in the British Columbia competition for their presentation of the social drama "Waiting for Lefty."

"Lazarus Laughed" two scenes from the play by Eugene O'Neill, presented by the Vancouver Little Theatre Association, was second choice.

Another Soumaging Trick

When a solitary barrel of olive oil arrived at Cairo, Egypt, from Palestine, the police, becoming suspicious, opened it. Inside they found a little water-proof package floating in the oil. It contained nearly a pound of opium. The person who came to collect the oil has been arrested.

Medicated with ingredients of Vicks VapoRub
VICKS COUGH DROP

Secret Documents

Papers Show How Woodrow Wilson Guided U.S. Neutrality Policy
Secret documents of the U.S. state department disclosed how Woodrow Wilson personally charted the government's neutrality policy, in the stirring days prior to Great War's entrance into the United States.

Page proofs of notes, letters, memoranda and other official documents which the department will publish soon include the rough outline of an early note to Germany, protesting unrestricted submarine warfare, drafted by the wartime president himself.

The draft was submitted to William Jennings Bryan, then secretary of state, April 22, 1915, as a result of the death of Leon C. Chester, an American citizen, in the sinking of the British vessel Falaba March 28 in the Irish sea by German submarines.

Wilson proposed the protest should be placed "on very high grounds," and not be limited to the loss of one citizen's life.

His decision determining United States policy was made soon after the first submarine sinkings, long before the destruction of the Lusitania and other ships inflamed American public opinion against ruthless undersea warfare.

Movable Sidewalks

Will Carry Passengers A Mile In Four Minutes

The "bi-way" sidewalk, a substitute for subways, which will carry its passengers a mile in a little more than four minutes, was described in its latest form to the American Institute of Electrical Engineers at New York.

The bi-way is a double sidewalk, one section of the material starts and stops, while its companion never stops, but leads from its intermittent compartment. Norman W. Storer, of the Westinghouse Electric and Manufacturing Company of East Pittsburgh, said biways would cost less to construct and install than subways and use less power.

Storer credited Ebenezer Hawkins of Lally, L.L., with originating the bi-way idea in 1874.

In the latest plan the never-stop, or express sidewalk, moves at an average speed of 15 miles an hour in cycles in which its speed ranges from 12½ miles an hour to 16½.

The slower speed of the express, the start-stop sidewalk, synchronizes every 42 seconds, to enable passengers to get on or off the express. The express sidewalk is fitted with chairs. The local sidewalk has no seats, but is fitted with handrails.

Lived Century In Caravan

Woman 103 Had Never Spent Day In A House

Old Mrs. Honore Matthews was born in a caravan. It was her cradle, her parlor, her bedroom, her kitchen, and in a caravan she died. Never in all her life did this wonderful old lady spend a day in a house. Throughout a life which began when William the Fourth was king she travelled, first, with her parents and then with her showman husband, through the length and breadth of England.

Almost to her last day she could thread a needle without glasses; and when for her came the day when her eyes closed for ever, her sons and daughters were about her in the caravan.

Naval Construction

Four Powers Agree To Announce Program Each Year

The international naval conference agreed to a plan by which Great Britain, the United States, France and Italy will announce at the principle of the shipbuilding capacity of the country in fixing the construction will be during the following 12 months.

The plan, offered as a compromise in an effort to limit the possibilities of a naval construction race, was the first major agreement reached by the conference in nearly three months of work.

Advertising Brings Results

Tourist advertising pays. Mr. J. D. Burton, chairman of the tourist committee, Yarmouth, Nova Scotia, says an advertisement in a New York paper brought 200 direct queries and one tourist family paid for the whole year of their vacation in goods purchased at Yarmouth stores. Direct evidence of that most cannot be thrown lightly aside.

One hundred and twenty million fish live in an average square mile of ocean.

There is no point on the earth where the moon never shines.

Why at 40 You Think You're "GROWING OLD"

It's "Old Age" and According to Scientists, May be Something New

At 40, many people think they're "growing old." They are a lot, have headaches, stomach upsets, dizziness, nausea, etc.

Well, scientists say the cause, in a great many cases, is merely an excess of the stress of the day. It is due to simply to neutralize the excess "acid" in the system.

When you have one of these stomach upsets, all you do is take Phillips' Milk of Magnesia after meals and before going to bed.

Try this. You'll feel like another person! Take either the familiar liquid "PHILLIPS", or the convenient Phillips' Milk of Magnesia Tablets, Made in Canada.

Phillips' Milk of Magnesia Tablets are sold everywhere. Each tin is a testimonial of good health.

PHILLIPS' Milk of Magnesia

Grain Elevators For Argentina

Huge Sum Is To Be Spent On Construction

Approximately \$22,000,000 is to be spent on the construction of grain elevators in Argentina, according to a decree issued by President Justo which approves in general the conclusion arrived at by the national committee on elevators.

The decree authorizes the ministry of agriculture to call for public bids to carry out the construction of the elevators as well as to negotiate the purchase of the existing Rosario terminal, with a capacity of 80,000 tons, now owned by a private concern, the purchasing cost being included in the total expenditure of 64,154,000 pesos (about \$22,000,000).

In a preliminary statement issued by the ministry of agriculture covering the views of the national committee of elevators it was stated as their opinion that the construction of these elevators should be started immediately. The first stage will comprise 15 units with a total storage of 42,000 tons, at a maximum cost of \$5,625,000 pesos (\$18,356,000).

Palestine Regulations

Sale Of Land Must Be Under Certain Conditions

The Palestine government will prohibit the sale of land by owners unless they retain a certain minimum considered indispensable for livelihood, it was announced by J. H. Thomas, British secretary of state for the colonies, in a message transmitted to Arab political leaders by Sir Arthur Wauchope, Palestine high commissioner.

On the question of barring Jewish immigration, the British colonial secretary declared there could be no question of the stoppage of immigration, and that the government "does not contemplate any departure from the principle of the absolute free capacity of the country in fixing the immigration schedule."

A Russian Invention

Rubber Glider When Deflated Will Park Into Submarine

The latest Russian invention to advance interest in the sport of gliding is a rubber glider which, when deflated, will go into an ordinary suitcase.

The glider is a shapeless bag of rubber when removed from its case. It is spread out on the ground, hard rubber tail piece and certain stiffening parts inserted and then the rubber is inflated through various valves. Tests in the air show the device does not collapse and will obey the controls of flight.

Its weight is 62 pounds, its length 29 feet and its wingspread 30 feet.—Science Service.

The largest living non-ruminating even-toed mammal is the hippopotamus. 2137

SUNDAY SCHOOL LESSON FEBRUARY 16

JESUS HELPS A DOUBTER

Golden text: I believe; help thou me. Mark 9:24.
Lesson: Luke 7.
Devotional reading: Isaiah 35:3-10.

Explanations And Comments

The Doubt of John the Baptist, Luke 7:18-20. Some of John the Baptist's disciples had remained loyal to him and they visited him in his gloomy dungeon in the Castle of Machabera. They brought John tidings of what Jesus was doing, especially of the deeds of mercy which they either saw Jesus perform or about which they heard. John, the desert dweller, the man of out-door life, must have been in his dungeon like a caged lion. Filled with gloomy thoughts about the sudden ending of his own career, hopeless of ever regaining his freedom, John was assailed by black thoughts. Jesus was not proving the kind of Jesus he had expected. John had looked for severity and Jesus had shown gentleness; for ruthlessness and Jesus had been mercifulness. Probably, too, John's loyal disciples expressed doubts about the new Prophet whose ways were so different from their master's.

Jesus disappointed John because he was not like John. John was the stern prophet of righteousness who preached about the axe being laid to the root of the tree and talked in stern tones of judgment. Small wonder that Jesus with his ministry of sympathy and healing, and his love, was a pharisee upon love and service, left John wondering.

John sent two of his disciples to Jesus with the question, "Art thou he that comest, or look we for another?"

Jesus' Message to John, Luke 7:21-23. Jesus did not then answer the question directly, but keeping John's disciples with him, he let them wait for a time. "Then he bade them go back and report to John the things they had seen and heard, the marvelous cures and the marvelous works. In the wilderness Jesus refused to perform a miracle for his own sake, but throughout his ministry he healed the sick, restored sight to the blind, gave strength to palsied limbs, and cleansed lepers. He would not tempt the Lord but he would be true to his own comfort or to gratify the curious crowd, but great needs always drew forth his boundless sympathy. The power he ascribed to God, Jesus, Father that dwelleth in me he doeth the works. By these deeds and by his good will to the poor, by good deeds and good news, he was authentic."

Royal guests are believed to abound on Iona Island, where, it is said, 48 Scottish, four Irish, and eight Danish and Norwegian kings are buried.

"Suii" Yourself With A New Knit

Household Aids by Alice Brooks

Easy to Do in Spring for Summer

PATTERN 5524

Come Spring—what's to succeed the top-coat? A knitted suit, of course, and none more serviceable or easily made than this softly tailored style whose neatly belted jacket is just plain knitting, with stripes in an easily learned contrasting stitch. Note the linked closing and crisp revers.

In pattern 5524 you will find complete instructions for making the suit shown in sizes 34 to 44, an illustration of it, and of all the stitches needed; material requirements.

To obtain this pattern send 20 cents in stamps or coin (preferred) to Household Arts Dept., Winning Newspaper Union, 173 St. Dermot Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

"Save" LEFT-OVERS with

Peppor's Waxed Tissue

MORE CONVENIENT TO USE . . .

Just hang a package in your kitchen. You'll be delighted with its convenience. Use with one hand, you can easily extract a single sheet at a time leaving the other hand free to hold the "left-over" when wrapped.

Warehouses At Calgary, Edmonton, Regina and Winnipeg

MADGE TAKES A TIP...

THESE HUFFING ARE SO LIGHT AND TENDER WHAT'S YOUR SECRET? JUST LINE YOUR SHAPE, BUY OF MAGNE, AND YOU'VE USED MAGIC BAKING POWDER.

DON'T RISK FAILURES Magic. See if it doesn't give you the lightest, most delicious muffins, biscuits, cakes you ever made! Add it to any recipe to use—actually costs less than 1¢ per baking! Made in Canada

In Command Of Ties To Make Inland Sea

The King Has Assumed Rank Of Admiral Of The Fleet, Marshal Of The Army And Air Force

The King has been pleased to assume the rank of admiral of the fleet, field marshal of the army and marshal of the Royal Air Force. The posts, announcement of which was made recently, were assumed at the time of his accession to the throne.

These ranks, formally placing the king in command of the kingdom's three defence forces, are the same as those held by the late King George.

Another formal announcement of certain alterations in the prayer book of the Church of England.

In the prayer for the king, "Edward" is substituted for "George", and the petitions for the royal family will read: "Our gracious Queen Mary, Albert Duke of York, the Duchess of York and all the royal family."

The Duke of York is included in this petition as being heir presumptive to the throne.

This order, also establishes the future designation of Queen Mary. It had been thought her majesty would be called "Mary, the Queen Mother," or even possibly "The Dowager Queen Mary."

Bulgaria devoted 17,000 acres to cultivation of roses in 1934.

Classes in skiing are now being held at Nice, France.

New Assault On Everest

Leader Of Party Confident Peak Will Be Reached

Bound for the "last great adventure on earth," the first members of the 1936 Mt. Everest expedition left London on route to Darjeeling, India, for a new assault on the world's highest mountain.

Three men and one woman departed first, and the nine other members of the party followed. The woman, Mrs. Noel Humphreys, accompanied her husband, Dr. Humphreys, only far as Darjeeling.

Hugh Rutledge, veteran leader of the 1933 expedition, again will lead the drive up the perilous round heights toward the 29,000-foot pinnacle which has defied four previous attempts and has slain nine lives.

"I believe we'll make it this time," he said quietly, standing in the crowded boat train station. "With any favorable weather, I'm confident of success."

In the 1933 attempt, Rutledge's party fought its way to within 1,000 feet of the top-only to be driven back by a monsoon which broke nearly a month ahead of schedule.

"Housework is a cure for nervous troubles," reads the latest report of the Institute of Medical Psychology, of London.

There are more than 5,000,000 motor vehicles on American farms.

SELECTION OF THE NEW SPEAKER MEETS CRITICISM

Ottawa.—Conservative Leader Bennett made Canadian political history when he shattered the traditional peaceful formality of the opening of parliament by criticizing the selection of Pierre Casgrain as speaker of the House of Commons.

The pomp and ceremony, subdued this year because of the death of King George, was eclipsed by the scene in the House of Commons. The Conservative leader accused the new speaker of attempting to dismiss more than 120 employees of the house summarily and without cause. He said Casgrain's conduct could not be condoned and would serve as a warning to opposition members of his political partiality and unfairness.

The former Liberal whip was elected speaker without a recorded vote, after the Conservative leader gave notice he would seek investigation of the dismissal episode, including the part played by Arthur Beauchamp, clerk of the house.

Lord Tweedsmuir officiated for the first time as governor-general, making the speech from the throne which forebode important bills to be presented this session.

At 3 o'clock the formal ceremonies were held. The governor-general arrived with a guard of honor and was saluted by an artillery band. Following with the national mourning over the death of King George, the scene in the rotunda seemed to be a war in the drawing room.

It marked the return to power of the Liberal leader and his followers who had been in opposition nearly six years. There are so many Liberal members in the new house they overflow into seats normally occupied by the opposition, even the Conservatives, members of the Social Credit group and the Co-operative Commonwealth Federation into a relatively small corner.

Premier Mackenzie King sponsored the motion to elect Speaker Casgrain after recounting his long association with the house and stressing his qualifications for the position.

It was not usual for speakers to be opposed upon the floor of the House, but Mr. Casgrain was elected unanimously but there were precedents for their opposition. It was here that a former Liberal whip made a good speaker because he was familiar with the house. In a general way he agreed with the government but there were arguments to the contrary.

"I regret," Mr. Bennett said, "that I have to say I am opposed to the selection of Mr. Casgrain as speaker." It had been known for some time Mr. Casgrain was to be speaker, Mr. Bennett said. With that knowledge he went out unofficially he had no fault to find.

On January 28, after the press announced Mr. Casgrain's selection, Mr. Bennett said, the sergeant-at-arms sent letters to more than 120 employees of the house asking them to resign. The resignation was not needed after the end of January.

"Those instructions," said Mr. Bennett, "came from Mr. Casgrain. He had the same right to give those instructions as the youngest and humblest member of this house."

It was expressly provided by the written law of parliament, said Mr. Bennett, that no employee of the house could be relieved of his office until a complaint was made against him and he was given an opportunity to state his defence.

It was a pity that for him to call attention to this situation said Mr. Bennett. But he asked if a man who was capable of such an arrogant disregard of the privileges of the house could have confidence of men on the opposition side.

In the presence of party politics governments often had to do things they did not like. He was proud, however, of the prompt action taken by Mr. King to halt the dismissal.

Mr. Bennett said he wished to be fair to the prime minister and to the government. Mr. King deserved the gratitude of all members.

The clerk of the house was reported as having made statements which demanded an inquiry. The whole matter would have to be investigated by a committee of privilege.

If Mr. Casgrain were elected, said Mr. Bennett, he would be in a peculiar position when he had to put to the house a motion to refer his own conduct to a committee.

"Can we condone the action of Mr. Casgrain?" asked Mr. Bennett. "I cannot although I am asked to do it. I cannot condone a clear violation of the law."

A Balanced Budget

Speaker Tells Of Factors In Britain's Economic Recovery

Toronto.—A balanced budget, a "trading tariff," and a "housing program" that builds houses, were named by Henry J. Allen, former governor of Kansas, as chief factors in Great Britain's recovery from economic depression.

Speaking to the Canadian Chamber of Commerce, Mr. Allen compared the British he found four years ago with the country from which he has just returned after another visit.

"Four years ago we were feeling sorry about Britain," today it is a far different story, a story of progress based on common sense," he said. The first-class unemployment law which from 1913 to 1920 had "built up a great fund of \$100,000,000" had been so dominated by "post-war strikes and Socialist victories" that its deficit stood at \$675,000,000. One-third of the country's manpower were on the dole.

When he went back last year the Kansas found prosperity. What happened in the meantime, he said, was that after the nationalist victory in 1921 the country's balance of trade budget was made. "The English man is old-fashioned," he decided the British were to take in as much or more than was paid out, so taxes were raised a shilling in the pound and the expenses cut by \$1,500,000,000. By 1933 the miracle had been accomplished."

Japan Adding To Navy

Planning Biggest Warships In World

London.—The Daily Express featured a sensational story that Japan was planning to build the biggest warships in the world.

The paper, published information which was claimed to have been received by a European country not a member of the naval conference from a former naval attaché at Tokyo, alleged Japan is preparing secretly to lay down battleships of 35,000 tons with 16- or 18-inch guns when the Washington naval treaty expires.

Other units of the reported Japanese navy would be battleships of 15,000 tons, a powerful fleet of 1,000-ton destroyers, and 3,000-ton submarine cruisers armed with two eight-inch guns.

The British battle cruiser Hood, 22,000 tons, is at present the largest warship in the world.

Says Clash Inevitable

Japanese Commander Sees War Between Britain And Japan

London.—An eventual war in the Pacific ocean between Great Britain and Japan, predicted by a London anti-Communist, Totsuichi Maru, of the Japanese navy, in his book, "Japan Must Fight Britain," published last week.

He predicts a conflict between the two powers is inevitable and says he is not sure that Japan probably will win with Britain.

"Either Japan must stop her expansion," he said, "or she will be forced to give up her whole of what she has or hoped to have," says Maru.

Revision of the Anglo-Japanese trade agreement might temporarily remove some of the economic difficulties, but that would only postpone the evil day. A collision is inevitable."

New Faces In Parliament

Majority Of Members Have Not Served

Ottawa.—Of the 241 members of the senate and house of commons who gathered in Ottawa for the opening of the 18th parliament, more than 100 were newcomers and the majority of these have never before served in parliament.

In the presence of party politics governments often had to do things they did not like. He was proud, however, of the prompt action taken by Mr. King to halt the dismissal.

Mr. Bennett said he wished to be fair to the prime minister and to the government. Mr. King deserved the gratitude of all members.

The clerk of the house was reported as having made statements which demanded an inquiry. The whole matter would have to be investigated by a committee of privilege.

If Mr. Casgrain were elected, said Mr. Bennett, he would be in a peculiar position when he had to put to the house a motion to refer his own conduct to a committee.

"Can we condone the action of Mr. Casgrain?" asked Mr. Bennett. "I cannot although I am asked to do it. I cannot condone a clear violation of the law."

Fear Anti-Semitic Riots

Assassination Of Nazi Leader In Switzerland May Cause Trouble

Berlin.—The German government acted to forestall anti-Semitic riots after demanding the Swiss government "discover and prosecute the person behind the murder" of Wilhelm Gustloff, Nazi leader in Switzerland.

In an official communication through its minister to Bern, the Nazi government called the slaying "a serious affair, which, without a doubt, was a political murder."

Jewish circles here expressed fear the killing would spur the anti-Semitic campaign.

RESERVE OPINION ON VALIDITY OF FEDERAL LAWS

Ottawa.—The supreme court of Canada has reached the end of the long constitutional reference, rendering judgment on validity of the last of the eight federal statutes which have been under legal fire for two solid weeks.

It will be a month or six weeks before judgments are delivered and in any event there will be appeals to the privy council in England, either by the Dominion or provinces, depending upon the supreme court's decision.

It will be necessary for the six judges to study 500,000 words of legal argument before rendering judgment and reading scores of case precedents cited by the opposing counsel. From the beginning to the end there were hundreds of dusty law books read in part.

The eight laws were as follows: Section 486 of the Criminal Code, Dominion Trade and Industry Commission Act, Employment and Social Insurance Act, Weekly Rest in Industrial Undertakings Act, Minimum wages Act, Limitation of Hours of Work Act, Natural Products Marketing Act, Farmers' Creditors' Arrangement Act.

In a general way, the provinces attacked validity of each of the eight laws but sometimes from the same angle or to the same extent. The Dominion argued each statute was constitutional as a whole.

Quebec and New Brunswick attacked every law as an infringement of provincial legislative fields as established by the British North America Act. Ontario and British Columbia attacked only clauses of section 486 and the Trade and Industry Act.

All provinces, including Manitoba, Saskatchewan and Alberta, attacked the law establishing minimum wages, eight-hour day and weekly day of rest on the basis parliament had no power to legislate provincial rights on the pretext of implementing treaty obligations.

SON MOURNS ABSENCE OF FAMOUS FATHER

Charles Kingsford-Smith, Jr.

Australia's "favorite son" is mourning the absence of his father, who spent his birthday at home in Sydney picking flowers, possibly in memory of his famous flying father, who is shown below with his Kingsford-Smith son in one of the last photos of the couple taken before the famous flier disappeared on a flight from England to Australia last year.

Blizzard Sweeps Japan

Seventy-Three Lives Lost In Violent Storm

Tokyo.—Seventy-three persons were known dead in Japan and 88 were feared lost at sea as the result of a two-day blizzard which swept over the centre of the island.

It was thought the death toll might be increased with word from isolated mountain villages to which communications were disrupted.

A two-day blizzard swept over the islands and killed 55 persons at Kusatsu, northwest of Tokyo.

Hope was abandoned for the Tama Maru, a freighter, with a crew of 45, which went out on a SOS, saying it was waterlogged and sinking.

Two steamers, which fought their way to Uman's position found no trace of her.

RAILWAYS AND MOTOR TRUCKS IN COMPETITION

Hamilton, Ont.—Competition between railways and motor trucks is still far from established on a proven economic basis, Sir Edward Beatty, president of the Canadian National Railway, said in an address before the Engineering Institute of Canada last night.

He defended the railways against a charge they had not adequately attempted to meet the competition of motor trucks. Conditions in the highway transportation business were unsatisfactory even to those engaged in it, Sir Edward suggested.

Because of this, resulting in acute internal competition among the highway carriers themselves, they now were disposed to welcome regulation of rates and services, whereas they had been bitterly opposed to it.

Sir Edward said there had been considerable confusion as to the extent of damage done to railways by highway competition. While he cited a total volume of business increased since 1926, construction and the marketing of agricultural equipment had been reduced to 50 per cent of the 1926 figures.

There was no reason to be surprised that carloadings during the period were only about 68 per cent of the 1926 volume, since these were industries which ordinarily contributed most to railway traffic.

It was certain that motor truck competition was not the chief factor in delaying recovery of freight movement by rail.

The public's general opinion, he said, that railways were "backpedaling" was not intelligently combating highway transportation was wholly baseless.

Railways could not hope to meet at a profit the major part of the competition of private motor cars, he said.

Increased importance of tourist business led to improvement in existing highways and construction of new ones.

It would have been bad policy for the railways to oppose "this natural development of social economic life."

Bread Eaten By Londoners

In Weight Would Average 1,800 Tons Every Day

That simple request at the London breakfast or tea-table, "Will you pass the bread, please," is just the end of a wonderful story as the Overseas Daily Mail. The beginnings of it reach right away to the cornfields of England, to the prairies of Canada and the United States, the pampas of Argentina and once in a while to India and Russia. But in between the cornfields and the table there is a great wealth of incidents, of scientific organization and big-scale operation and manipulation which are little guessed by the diner who makes that simple request. If an attempt were made to relate the whole of the story the figures that would have to be mentioned would reach astronomical dimensions.

It is fair to assume that the eight millions of people in the metropolis each consumes half a pound of bread a day. This means that about 1,800 tons of bread disappear down the throats of London's citizens every day of the year. If the whole mass were represented by 2-pound loaves and placed side by side there would be a chain of bread stretching from London to Brighton and back again. And it would disappear in 24 hours. For this bread London pays about £30,000 every day.

The shipping of wheat has a romantic history. England is the largest buyer in the world, and in the season the argosies laden with the golden grain stream across the Seven Seas, and the annual arrivals exceed 5,000,000 tons. The most picturesque scene in this business is the annual wheat race from Australia to the "windmills" some of whom come right up the Thames to London docks, and it is a sight to see one more argosy laden a huge dock mill with its lofty masts towering above the big mill buildings. The mile run 24 hours and some of them will supply enough flour in 5 days to make 350,000 to 400,000 pounds of bread.

After the millers come the bakers, but these are less numerous in London than they used to be. At one time the working baker was a figure familiar to everyone. There still survive a few of the old-fashioned bakers' shops, but thousands have been displaced by the modern factory-bakeries, each of which employs many hundreds times larger than that of the most flourishing working baker. The growth of these large factory bakeries is due to the perfection of bakehouse machinery, which makes it practicable for every operation to be performed mechanically, and to motor traction, where the old-time baker depended for custom on what he could sell on foot, and by counter and by horse van in the neighborhood, the factory bakery with its fleet of motor vans can deliver to shops and homes within a radius of a dozen miles and more.

Better Machines For Farm

Implements Of Two Decades Ago Declared Out Of Date

Even greater improvement in farm machinery during the next 20 years than was made in the last 20 is foreseen by S. H. McCrory, chief of the Bureau of Agricultural Engineering of the Department of Agriculture. He holds that many farming implements of two decades ago are as much out of date now as a 1915 automobile. He believes that smaller and more simplified machines will be developed. Mr. McCrory quotes figures compiled by a committee of agricultural engineers to indicate the efficiency of modern farm machinery. On the quality-efficiency rating of 100 last twenty years ago, the engine cutter of the present era rates 215; the grain threshing, 166; the power corn sheller, 190; the machine separator, 180; the grain drill, 140; the tractor plow, 180; the corn picker, 210; the disk harrow, 190; and the grain binder, 170—New York Sun.

Scept Chimeras At Palace

William Cecil, who was formerly minister of the duchy of Buckingham Palace and Windsor Castle, has died in a hospital in Edinburgh, England, at the age of 77. He was very proud of his calling and his despatch bore the inscription: "To His Majesty the King."

By improved technique, surgeons report that it is now possible to cut and lengthen bones so to extend a shortened leg as much as five inches.

The hardest job of all is trying to keep busy when you are not to.

GIANT BRITISH LINER PREPARES TO MAKE HER MAIDEN VOYAGE

A recent picture from the air, taken by a staff photographer of The Times, of the giant liner Queen Mary in the fitting-out basin at Clydebank, gives an excellent impression of her size. She will leave this basin for Southampton in March, and will begin her maiden voyage from there on May 27th.

Alfalfa Crop Kept Fresh

Test With Dry Ice And Air-Tight Silos Was Success

An experiment successfully concluded in Clark county, Ohio, in the direction of the alfalfa crop, the present methods of hay-making and of the large barns now deemed essential to the prosperous farmer.

With dry ice as a preservative, an alfalfa crop was kept fresh and green for four months in an air-tight silo on the Lynn-Clemens dairy farm, northeast of Springfield, and now is being fed to a dairy herd while all other herds are living on hay and artificial feeds.

The alfalfa, according to A. G. Boushew, owner of the farm, was preserved at less expense than it would have taken to store it as hay. Furthermore, it lost only 5 per cent of its nutritive value, whereas alfalfa stored as hay loses 74 per cent of its food value.

Dr. Oscar E. Lee, of the Department of Agriculture at the Ohio State University, directed the experiment. When the silo was opened, Eer conducted hurried tests and announced that the alfalfa had retained almost all of its richness.

A vast increase in the quality and quantity of milk in winter months will result from the new method of preserving feed, Eer believes.

Twenty-four tons of alfalfa were stored in the specially constructed silo last September together with dry ice, which cost about \$24.

As it evaporates, dry ice forms carbon dioxide, which in turn forces the lighter oxygen to the top of the silo, away from the alfalfa. Thus the gases protect the alfalfa from the oxygen, which produces fermentation. A specially prepared metal silo was used for the experiment.

Laughter Club Formed

Members Are Pledged To Spread Gaiety Every Day

A Laughter Club, which holds weekly meetings to promote the spread of laughter and gaiety, has been formed in Prague. Its members pledge themselves to tell or play one joke a day. Membership is free, but one indispensable qualification is the ability to sing or whistle the song of the cuckoo. It is the club's official song. Also this people wishing to join must be nominated by a fat member, and vice versa. The motto of the club is "Laughter Is Health." Charlie Chaplin and Laurel and Hardy have been asked to become honorary presidents. Any member wearing "that crazy look" is asked to resign if he does not change his expression after being warned.

Gloves Are Important

Have Always Played Big Part In Affairs Of Mankind

Gloves have always played an important part in the affairs of mankind. At one time they were worn by the clergy as a sign of having hands clean of evil. Gloves were recognized as payment for some small service, but if it was a more important one a small sum of money was enclosed after wearing "that crazy look" was asked to resign if he does not change his expression after being warned.

Monsoons are considered sacred and lucky in India.

To Honor Leif Ericson

On October 9 Saskatchewan Will Remember Norse Explorer

Saskatchewan will proclaim Friday, October 9 as "Leif Ericson Day," in honor of the discoverer of America by this Norse explorer about the year 1,000 A.D.

While it will not be a holiday, the government will suggest the day be observed by services in churches and exercises in the schools. President Roosevelt has already taken similar action for the United States.

The Norse sagas say Leif Ericson, son of Eric the Red, sailed westward with 35 men. He is believed to have touched first at Newfoundland. From there, legend says, he sailed on to what is now Nova Scotia, which he called Woodland.

He is reported to have stayed in Nova Scotia for two years from 1002 to 1004 A.D.

His brother Thorvald is said to have headed a second expedition to Nova Scotia in 1004 or 1005 A.D. These explorations were conducted from Greenland where a colony had been founded by Eric the Red in 986 A.D.

The Norseman is the first province of Canada to issue a Leif Ericson proclamation. Oct. 9, the date selected, is believed to be the day upon which Ericson first arrived at America.

Bidding For Poultry Congress

United States Wants Next World Meeting Held There

A committee has been formed in Chicago to take steps to secure the holding of the next World Poultry Congress in the United States in 1939. H. E. Van Norman, 292 West Washington street Chicago, is provisional secretary and called a meeting of representatives of the leading poultry organizations in the United States which was held in New York on February 7.

Wood-teams was the Indian name for rubber in its milky form flowing from the Hevea tree.

Higher Train Speeds

New Light Railway Equipment To Be Tried Out This Year

Lightweight railway equipment, designed for higher speeds, will probably be in operation on Canadian railroads this year, W. A. Mather of Winnipeg, general manager of the Canadian Pacific Railway Company's western lines, said in an address before the annual meeting of the transportation and customs bureau of the board of trade at Vancouver.

The equipment, he said, is now being constructed in the railway shops and will be tried out first on Eastern Canadian lines. The experience gained will be put to use in designing future equipment of this type. Air conditioned cars will also be tried out on the Canadian lines.

Mather said Canadian railway companies are keeping in touch with modern transportation but the Canadian climate and sparse population force them to move cautiously. One drawback to the introduction of the lightweight equipment, he said, was the fact that winter conditions make imperative the adding of six tons of insulation and heating equipment to each car.

A Cruising Magnet

Used In Michigan To Clear Roads Of Metal

The Michigan Highway Department has collected about half a ton of scrap metal, ranging from nails to tobacco tins, by means of the cruising road magnet. This novel magnet costs about 25 cents a mile to operate and covers an average of 42 miles a day. Built by the Highway Department, the machine is eight feet wide, 11 feet long and six feet high. It is drawn behind a truck. The metal objects picked up are sent into a hopper—New York Times.

About the only different between a hunting license and a driving license is that there is no close season for pedestrians.

French writer Unable To Conceal Civilization Without Enigma

Paris despatch in London Morning Post of Jan. 2: "The defeat or even retreat of Britain would be a disaster without precedent and without name."

This conclusion on the possible outcome of what he describes as the British-Italian antagonism that has emerged from the Abyssinian war is made by M. Gabriel Hanotaux, of the French academy, in an article in "L'Echo de Paris."

He bedevils M. Hanotaux, is based fundamentally on the question of the domination of the Mediterranean. "It is a question of civilization itself," he declares. "Think for a moment. Can you conceive of civilization without England?"

"Who is it that has spread throughout the whole world the law of justice, the authority of right, the credit of the spoken word, the security of exchanges? Who is it but the English gentleman?"

The rivalry over the domination of the Mediterranean, declares M. Hanotaux, dates back to before 1913. It has a body like a pigeon, wings like those of an aeroplane, and is mounted on three wheels.

"It is a question of Britain's world communications. Her whole empire is at stake. It is that which has stirred the soul of Britain."

Romce Atte, American actor, who is in England, cured himself of stammering only to find that he was still stammering when he returned to the stage.

Making Success Of Work

Russian Girl Proves Women Can Be Electrical Engineers

When Esther Haskin received a degree in electrical engineering at the University of Alberta convocation services last May, the sceptics asked, "who would employ a feminine electrical engineer?"

"Wait and see," said Esther. "To-day she is working in the General Electric Company's Toronto plant in research on electric light bulbs. Policy of the organization is to provide university graduates with extensive training before allowing them to attempt practical application of their knowledge and the former co-ed is now being trained by expert scientists."

She came to Canada from Russia. She intends to return there some day. Perhaps changing conditions in the Soviet have influenced her original determination to return there immediately upon graduation, says Dr. H. J. MacLeod, head of the University of Alberta electrical engineering department.

"Esther is the only girl to have ever received an electrical engineer's diploma from this university," says the professor. "She was an excellent student. She is a very capable and energetic person, she had courage and the strength of her convictions. Her success in obtaining employment should not influence other prospective engineers in choosing the electrical engineering degree because her qualities and abilities are of the variety produced by far more than the university," declares Dr. MacLeod.

No Change Anticipated

Royal Ranch In Alberta May Retain Name Of "E.P."

No change is anticipated in either the name or proprietorship of the "E.P." ranch near High River, Alta., following the accession of its royal owner to the empire's throne. The ranch, purchased in 1919 by the present King when he was Prince of Wales, is purely personal property and as such is not subject to those perquisites which more or less automatically become part of the duties of the hereditary monarch.

Since its acquisition, the royal interest in the property has been confined to public opinion.

Named "E.P." for "Edward Prince," it is thought unlikely this will be changed to "E.R.I." now that he has become "Edward Rex et Imperator."

Western ranchers point out a registered brand known all over the continent is a great asset and one that is not to be sold without considerable monetary loss.

Professor W. L. Carlyle, manager of the ranch, has no information on the question. Nor could he make any comment on reports that the new King might visit his ranch as part of his tour of duty.

Prof. Carlyle, Mr. Carlyle and employees of the ranch attended memorial services in High River on January 28.

The Law Of Justice

French Writer Unable To Conceal Civilization Without Enigma

Paris despatch in London Morning Post of Jan. 2: "The defeat or even retreat of Britain would be a disaster without precedent and without name."

This conclusion on the possible outcome of what he describes as the British-Italian antagonism that has emerged from the Abyssinian war is made by M. Gabriel Hanotaux, of the French academy, in an article in "L'Echo de Paris."

He bedevils M. Hanotaux, is based fundamentally on the question of the domination of the Mediterranean. "It is a question of civilization itself," he declares. "Think for a moment. Can you conceive of civilization without England?"

"Who is it that has spread throughout the whole world the law of justice, the authority of right, the credit of the spoken word, the security of exchanges? Who is it but the English gentleman?"

Protect Resources

Saskatchewan Plans To Protect Natural Resources Of Province

In protection and development of the natural resources of Saskatchewan there is opportunity for bringing about a better balance in the economic life of the province, said Hon. W. P. Taylor, minister of natural resources, addressing the annual meeting of the Moose Jaw Wild Animal Park Society, held at the Grand Hall hotel recently.

While agriculture will undoubtedly remain the great primary industry, he continued, the varied and wealthy natural resources of the province are assets which can well be used to balance the economic life of years to come. These resources must be fully protected both by government and people, he urged. The government, he explained, is restricted in expenditure of money on protection and developments at present because of the necessity for raising funds from all sources of provincial revenue for relief and care of poverty stricken residents of the province.

Nevertheless, he said, every effort was being made to protect resources. Agriculture is the mainstay of the province. To protect the forests and animals of the north the department has been forced to refuse hundreds of requests for new immigrants to the northland, many of them from northwestern southern Saskatchewan. They are not allowed to fish and game bag limits and in use of timber.

To protect small animal life the department intends re-establishing the bounty on timber wolves. The wolf menace has increased greatly in the last few years. It is now legislation allowing the department to place a bounty on the wolf. It is expected that the bill will be introduced at the coming session of the legislature, he intimated.

Power Is Exaggerated

Public Opinion Not Greatly Influenced By Means Of Radio

Radio is new and in this business of politics and parties it enjoys a prestige that, in this country especially, attaches to novelty. Actually there is good reason for thinking that people have been greatly exaggerating the potency of this new engine of public opinion. It is too easily taken for granted that any speaker who goes on the air has a vast audience. It is his position hanging on his words. If they listen to him it is too easily taken for granted that the radio actor holds the fortunes of his country in the palm of his hands.

It is not so simple as all that. In fact, there is more to be said about a very convincing way of measuring the size of a radio audience. People largely go by the number of radio sets in the home. It is still harder to make sure the spell which the speaker casts over his audience. These are telegrams and postcards, to be sure, but they do not say how long the speaker will endure—New York Times.

Most English Of Englishmen

Late King Was Precisely Type British People Wanted

George Windsor who was the most English of Englishmen. He could feel the harmony of what he considered as inconsistency, a republic whose people rule themselves in the name of the King. And so he made a good King of England, for he was precisely the kind of king that the British people wanted.

George V. knew his job and its limitations. He attended strictly to his duties. He was a man of his nation demands and no more. When occasion permitted him to initiate action without offending tradition or propriety, he did so with decision that showed he knew what he was about—San Francisco Chronicle.

A Quyer Flying Machine

An ordinary bicycle with ball-like wings attached—this is a one of the queer flying machines on view at the Concours Lepine, the exhibition of inventions in Paris every year. Another they aircraft driven by human power is called the "Pigeon-plus."

It has a body like a pigeon, wings like those of an aeroplane, and is mounted on three wheels.

Caribou Move South

Caribou herds have been recently sighted 50 miles south of McMurray. This is believed to be the first time since the white man came to this country that the caribou have travelled so far south. The animals are thought to have driven south in search of fresh grazing.

"I don't think I should tell him just yet that his wife's had triplets."

—Lustig Blatter, Berlin.

Do This to Ease Sore Throat Instantly

Relieve Soreness in Three Minutes This Easy Way

1. Crush and mix "Aspirin" tablets in 15 glass of water.

For quick relief from sore throat you've ever known, follow directions above.

Relief will come almost instantly. For "Aspirin" acts like a local anesthetic to ease throat pains and at the same time soothes irritation and soreness.

Doctors endorse this treatment. For it provides a medication, and in

DEMAND AND GET

FLEMING'S

—BOLLY—

LAWRENCE A. KEATING

SYNOPSIS

The story opens with Link Fleming, addressing a meeting of the Boone County cattlemen called together with the object of forming an irrigation company.

Roger Kilgo, the boss of the Rawhide and nearby town, who had been asked to approve the plan, but was really opposed to it, had for some time been a derelict mining engineer, whose name would not be given to give his expert opinion in favor of the plan to several cattlemen.

He declared that irrigation in Boone county so far as Hamilton's ranch was concerned, was a thing that had to be done.

The meeting terminated. Buzz Hamilton and his sister, Helen, Link Fleming and Roger Kilgo were left alone. Fleming was questioning about his irrigation plan. This angered Buzz, who accused Fleming of trying to influence his sister and to make her "spread" his "spread".

Buzz asked at Fleming in an uncontrollable fit of anger, but when he saw that Fleming was not listening, he turned to Helen, who was sitting in the chair, and told her to go to her room.

Link Fleming, who was sitting in the chair, was surprised to find that Helen was not going to her room, but was sitting there, looking at him.

Link Fleming, who was sitting in the chair, was surprised to find that Helen was not going to her room, but was sitting there, looking at him.

stop against. His watery grey eyes went round. His cavernous jaw slackened, and for once Halby forgot to tug at his ear. Veterans of many a cowardly accident, he resumed instantly that someone must be inside the ranch house, hence the explosion.

Already the fire groped hungrily toward the roof. Sime dashed to the main barrel, found a thin skimming of ice on it, and broke it with a hard fist. He splashed the chill water over his clothing in a swift effort to smother himself. Then without hesitation he rushed to the front door of the house, and shading his eyes from the fearful heat, peered inside for sign of his employer.

Face-down and utterly unconscious, Link sprawled in the track of the fire that gnawed into dry flooring. Halby sprang to his side. Kneeling, he pulled the rancher's arm around his neck. Then he grasped Fleming's knees and started outside with his burden.

Once he stumbled and almost dropped his employer. Somehow he kept on through licking tongues of fire that made the clothes of both men smoke as though any instant they would burst alive with flame. The sharp night wind struck them like a blow, its smart and stinging quality to their scorched faces.

Link moaned. "Hang on!" Sime mumbled, coughing from the heavy smoke.

As he reached the corral and sank exhausted beside the jumper rail, he both got snarled with the smoke and the sweat around the curve of the nose, and another. Waco Byrne hit the ground and came running.

"Link! Stay, I'm dead!" he cried. "He's dead!"

"Bless his soul," he said, "he's dead!"

YOUR DRUGGIST

"Plans?" She stared, not comprehending at once. Then she flew out of the bunkhouse.

"It takes a long time. I'm sending one of the boys for Dr. Hellen."

"I wish I could see them cut right off."

Byrne promised.

When Hellen returned her steps

she found the doctor. He was

shoulders drooping. He

in her brown eyes, as filled

with pain, met those of the Star

Loop once more. He was

between them for a moment; then

Link signed and lay back.

"Gosh," he muttered dully.

She strove to swallow the lump

in her throat. "Roger and I heard

about that Tommy being shot. Of

course I knew you hadn't done it,

and I tried to stop the talk in town.

Now the plans are burned."

There was a short silence during

which Waco tipped out of the cabin.

"Gosh," he muttered to himself.

"That look she's got in her face

gettin' burned?"

"It means we can't start the dam

this fall. And next Spring it will

be harder than ever to finance.

Means hiring extra men, for we

won't be able to spare any of our

own. There's the cost of the plan,

plans, too, and the loss of the alfalfa

we'd have."

"How did this happen, Link?"

"He told me as much as he knew."

"I lost a match in the stove and

waited to see the pine shavings

catch. Then I closed the door and

stepped back to the plans again. Had

then spread out on the table. It

looked pretty plain that we could

alter Tommy's work a little and

our dam upstream. All the directions

were there now the job should be

done."

He scowled past her, toward the

door. "Why should a stove blow up

like that? The pipe was open. The

must have been dynamite in it."

"Dynamite?" A shudder racked her

body. "Oh Link, I was afraid you

was afraid you were."

"Mr. Lincoln Fleming, Esquire,

here?"

Humans Developing Fast

Our Descendants Will Withstand

Superhuman Endurance Tests

The human race is developing

faster than it ever did, in the opinion

of Dr. Alex. Hridlicka, curator of

anthropology at the Smithsonian

Institution, Washington.

Dr. Hridlicka, quoted by the American

Magazine, says our descendants

Mechanical Ears

New Method Of Piloting A Plane By

Sound Alone

Mechanical ears for piloting a plane by sound alone, an entirely new principle in aviation, were described to the Institute of Aeronautical Sciences, Luis De Florez, of the De Florez Engineering Company, of New York, who has spent

three years developing them and flown many hours blindfolded, gave a "ground demonstration" with the instruments.

"It is possible," Florez said, "that a blind man, with his more accurately timed hearing, might become a better pilot than one who can see."

All "blind" flying heretofore has been done with the eyes, watching instrument boards. But with "mechanical ears" the pilot flies wholly by listening to a pair of ear phones. He can use them in fog, clouds, darkness, on any kind of plane.

The phones are connected with a tiny propeller, set far out on the leading edge of one wing. This propeller is the size of a toy pin wheel. Like the toy, it changes speed with acceleration of the plane.

It runs faster if the plane dips, slower if it ascends, steady if level. The propeller drives a little generator. This generator hums in the pilot's ears.

Its note grows shriller for dip, lower for ascent, tells him when the plane is level. It tells him quicker than the eye could do the same thing. For the electric current is amplified so that a slight deviation shrieks its warning.

In the phone circuit there is a small oscilloscope, set to indicate the slightest turn of the ship to left or right. If the plane turns, its gyro cuts off one ear phone.

The pilot then knows he is starting to turn toward the side on which he still hears the hum. Here, too, the sound warning can be quicker than the eye.

Little Helps For This Week

Stand fast therefore in the liberty wherewith Christ hath made us free, and be not entangled again with the yoke of bondage. Galatians 5:1.

They are slaves who fear to speak the truth. For the fallen and the weak: They are slaves who will not think. Hatred, scolding and abuse. They are slaves who dare not be in the right with two or three.

The real corruptors of society may be, not the corrupt, but those who have lost the righteous leave, the salt that has lost its savor, the innocent who have not the moral courage to stand up for the truth.

They are slaves who dare not be in the right with two or three.

They are slaves who fear to speak the truth. For the fallen and the weak: They are slaves who will not think. Hatred, scolding and abuse. They are slaves who dare not be in the right with two or three.

They are slaves who fear to speak the truth. For the fallen and the weak: They are slaves who will not think. Hatred, scolding and abuse. They are slaves who dare not be in the right with two or three.

NOTICE TO CREDITORS
AND CLAIMANTS

In the Estate of HENRY, WILLIAM BEST, late of Carbon, in the Province of Alberta, Farmer, Deceased.

NOTICE is hereby given that all persons having claims on the estate of the said Henry William Best, who died on the 24th day of December, 1935, are required to file with the undersigned by the 15th of April, 1936, a full statement, duly verified, of their claims and of any securities held by them and that after that date the Administrator of his estate will distribute the assets of the deceased among the parties entitled thereto, having regard only to the claims of which notice has been so filed or brought to his knowledge.

DATED this 10th day of February, A.D. 1936.

JOSEPH J. GREENAN,
Solicitor for the Administrator,
Carbon, Alberta.

A rink composed of Percy Edwards, Sandy Reid, Stan Torrance and Chas. Smith has been entered in the Rockyford Bonspiel, which is being held this week.

The picture shows will commence in Carbon again tonight after a six week's vacation. "Broadway Gondolier" is the feature.

Mr. and Mrs. Jack Reid and family returned to Carbon on Tuesday from Vancouver, where they have resided for the past year or more.

It has been reported that Jack Mansley has taken the position of section foreman at a point on the C.P.R. east of East Coulee.

Remember to keep the date of Monday, March 2nd open. The United Church Ladies' Aid will present Mrs. Jarley's Waxworks. "The one and only Jarley's" Greatest show of its kind on earth. Showing wonders that beggar description. Come and see them and enjoy the best laugh in years. Vocal numbers and tap dancing between the acts. All local talent. Admission 50c and 25c.

The weather has moderated somewhat the past couple of days from the cold spell of the previous two weeks and on Tuesday night the temperature only dropped to about 15 below. The days are bright and during the day the temperature has risen to the zero mark. While not real warm, the change in weather is appreciated.

Flapper—I'd like to see the captain of the ship.
Rookie—He's forward, Miss.
Flapper—I don't care, this is a pleasure trip!

Customer—While in New York I paid five dollars in tips alone.
Walter—Were you there many years, sir?

Lecturer (in loud voice)—I venture to assert that there isn't a man in this audience who ever done anything to prevent the destruction of our vast forests.

Man in audience (timidly)—I've shot woodpeckers.

A young colored couple were sitting at the foot of the Statue of Liberty. Henry was holding Mandy's hand.
"Henry," said Mandy, "does you all know why dey has such small lights on de Statue o' Liberty?"
"Ah dunno," replied the Ethiopian swain, "unless it's because de less light de mo' liberty."

First Miner—This butter is so strong it could walk over and say "hello" to the coffee.

Second Miner—Yes, and the coffee is too weak to answer.

Doctor (to Aberdaron, to whom he had been urgently called): "What on earth have you been doing, Jack? Why, your tongue is absolutely black, man!"
Jack: "I dropped a bottle of whusky on the newly-laid road."

EDOUARD J. ROULEAU,
Editor and Publisher

AND THE NEWSPAPERS

Mr. E. P. Foster, our government
member, in speaking on the debate
on the Speech from the Throne, made
the remarks that Mr. Aberhart, single-
handed, conducted a class of
700,000 people in the principles of
Social Credit. Mr. Aberhart did conduct
the class, but the newspapers in
city and outlying points, published the
contents of Mr. Aberhart's talks on
Social Credit, and thus carried the
theory to far more "scholars" than
did Mr. Aberhart himself. While many
editors did not see eye to eye with
Mr. Aberhart on the Social Credit
scheme, most publishers printed the
content of Mr. Aberhart's talks in the
news columns of their papers.

The radio also played a large part
in the so-called "education" of the
people to Social Credit principles.

CROP TESTING PLAN

Four radio broadcasts dealing with letter seed and crop improvement
will be given by Mr. H. G. L. Strange, Director of the Crop Testing
Plan, as follows:

Tuesday, Feb. 11th.—The use of rusted and frosted grain for seed.
Feb. 18th.—The standard varieties of wheat, oats and barley.
Feb. 25th.—How to buy and use good seed.
Mar. 3rd.—Cleaning and treating seed—use of the fanning
mill.

TIMES OF BROADCASTS:

Quebec Winter Sport Mecca

Premier dog-racing event in North America, the International Dog Derby at Quebec City on
February 20-21-22 is expected to attract hundreds of winter sports enthusiasts from Canada and the
United States to see the leading winners of the two countries in competition and to enjoy the skiing,
tobogganing, skating, and curling centring around the famous Chateau Frontenac. An interesting
duel is expected this year between Harry Wheeler, of St. Jovite in the Laurentians, champion last
year, and Orville Carriere, of Quebec City, who defeated Wheeler this year in Lacolle, New Hampshire
annual derby. A starting contrast to this event in Eastern Canada is the annual golf competition held
at the same time at Victoria, B.C., in the Evergreen Playground of the West. Both are sponsored
by the Canadian Pacific Railway.
